

JANDAKOT ROAD PRECINCT

FLORA AND VEGETATION SURVEY

Report Date: 30 October 2020

Version: 2

Report No. 2020-535

PGV ENVIRONMENTAL

The logo consists of the letters "PGV" in a large, bold, white sans-serif font. To the right of "PGV", the words "ENVIRONMENTAL" are written in a smaller, white, all-caps sans-serif font. The background of the logo is a stylized orange graphic that resembles a landscape or a series of overlapping curved bands.

1 INTRODUCTION

1.1 Background

The Jandakot Road Precinct consists of a large number of small rural lots located between Jandakot Road and Jandakot Airport in the City of Cockburn (Figure 1).

To assist the landowners to understand the environmental features of the Precinct that need to be considered in any future proposed change of land use PGV Environmental was commissioned to undertake a flora and vegetation survey of the area. The survey area (the site) consists of 34 lots bounded by Jandakot Road to the south, Industrial land to the west, Jandakot Airport to the north and Cessna Drive to the east (Figure 2).

1.2 Scope of Works

A Detailed Flora and Vegetation Survey was undertaken in accordance with EPA Technical Guidance *Flora and Vegetation Surveys for Environmental Impact Assessment* (EPA, 2016). The survey included the following:

- Desktop search and review of the Department of Biodiversity, Conservation and Attractions (DBCA) Threatened and Priority flora Databases;
- A search of the Naturemap website (DBCA, 2020);
- A search of the Commonwealth Government's Protected Matters Search Tool (DAWE, 2020) to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation (EPBC) Act 1999*;
- Examination of historic and recent aerial photography and contour and soil maps to provisionally identify vegetation types and condition;
- Field survey using quadrats to record native and introduced species as well as a thorough site walkover of any areas of native vegetation;
- Recording of any significant plant species using a hand-held GPS;
- Description and mapping of vegetation types and vegetation condition; and
- Compilation of a flora list.

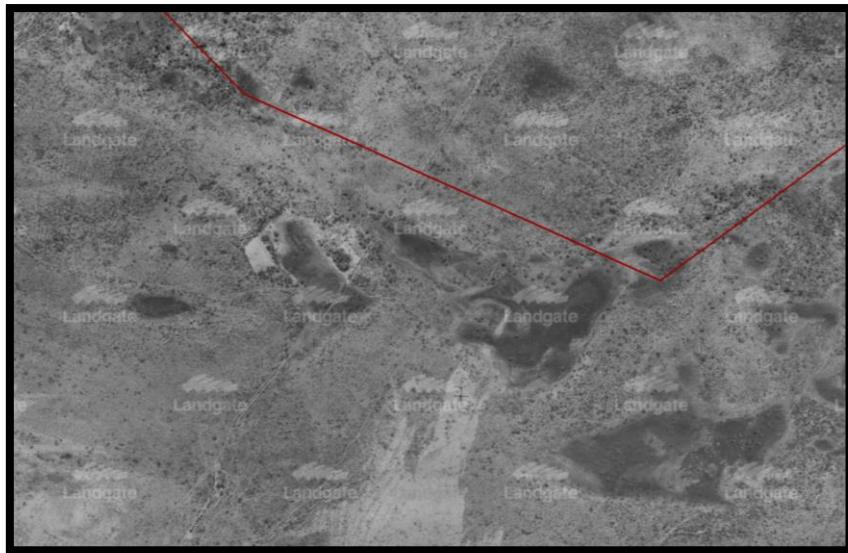

2 EXISTING ENVIRONMENT

2.1 Land Use

The site is currently developed as ‘Special Rural’ lots and is zoned as ‘Rural – water protection’ under the Metropolitan Region Scheme (MRS). The site is zoned ‘Resource’ under the City of Cockburn Local Planning Scheme No. 3 (WAPC, 2002).

The earliest available historic aerial photograph on-line (Landgate, 2020) shows that the site was partially cleared in 1953 (Plate 1).

Plate 1: Aerial Photograph 1965 (Landgate, 2020)

Aerial photography from 1963 shows more clearing has occurred for agricultural purposes (Landgate, 2020). Clearing continued to 1977 (Plate 2).

Plate 2: Aerial Photograph 1977 (Landgate, 2020)

In aerial photography from 1981 the western half of the site has been developed for special rural lots, with some vegetation retention on most lots (Plate 3) (Landgate, 2020).

Plate 3: Aerial Photograph 1989 (Landgate, 2020)

The special rural lots in the eastern half of the site remainder of the development were established between 1985 and 1995 (Plate 4) (Landgate, 2020).

Plate 4: Aerial Photograph 1995 (Landgate, 2020)

2.2 Topography

The site is gently undulating from a low of 28m Australian Height Datum(AHD) in the eastern part to 42mAHD along the western boundary (Figure 2).

2.3 Geology and Soils

2.3.1 Geology

The site is mapped as part of the Bassendean System, the oldest of the three dune systems on the Swan Coastal Plain (Bolland, 1998). The Bassendean System consists of very low relief, leached, grey siliceous Pleistocene sand dunes, intervening sandy and clayey swamps and gently undulating plains.

These occur immediately west of, and partly overlie, the Pinjarra Plain. These soils are very leached, infertile and mildly acidic (DPIRD, 2020).

2.3.2 Soils

The soils on the site have been described by the Department of Primary Industry and Regional Development (DPIRD) as:

- Bassendean B1 Phase (212Bs_B1) which are described as deep bleached grey sands sometimes with a pale yellow B horizon or a weak iron-organic hardpan at depths generally greater than 2m. These soils occur on extremely low to very low relief dunes, undulating sandplain and discrete sand rises;
- Bassendean B2 Phase (212Bs_B2) which are located on flat to very gently undulating sandplain with well to moderately well drained deep bleached grey sands with a pale yellow B horizon or a weak iron-organic hardpan 1-2m;
- Bassendean B3 Phase (212Bs_B3) mapped on it which are closed depressions and poorly defined stream channels. The soils are poorly to very poorly drained moderately deep, bleached sands with an iron-organic pan, or clay subsoil and surfaces are dark grey sand or sandy loam; and
- Bassendean B4 Phase (212Bs_B4) which is located on broad poorly drained sandplain. The soils are described as deep grey siliceous sands or bleached sands, underlain at depths generally greater than 1.5 m by clay or less frequently a strong iron-organic hardpan (DPIRD, 2020).

2.4 Hydrology

Groundwater is at approximately 24 to 26m AHD, which is 2 to 18m below the surface level, and generally flows to the west (DWER, 2020). Surface water is likely to be limited to the wetland areas. There are five wetlands on the site (National Map, 2020) as outlined in Table 1.

Table 1: Wetlands on the Site

Wetland Number	Management Category	Wetland Type	Completely/Partially in the site
6778	Conservation	Dampland	Partially
6881	Resource Enhancement	Sumpland	Partially (about half)
6780	Multiple Use ¹	Dampland	Mostly
6781	Resource Enhancement	Dampland	Partially
6880	Multiple Use	Dampland	Completely

¹ – Changed to Multiple Use by DBCA Wetlands Program on 5 May 2020 but still mapped as Resource Enhancement on the geomorphic wetland mapping website.

3 METHODOLOGY

3.1 Database Searches

Searches of the following databases were undertaken for a 10km radius around the central point of the site prior to the site survey:

- Department of Biodiversity, Conservation and Attractions (DBCA) Declared Rare and Priority Flora database and Threatened Ecological Communities database (Appendix 1);
- DBCA Naturemap Database (DBCA, 2020) (Appendix 2); and
- The Commonwealth Government's Protected Matters Search Tool to identify species potentially occurring within the area that are protected under the *Environment Protection and Biodiversity Conservation (EPBC) Act 1999* (DAWE, 2020). A radius of 5km was used for this database (Appendix 3).

Other available information was also researched to determine any additional studies that had been completed on or near the site.

3.2 Site Survey

A flora and vegetation survey of the site was conducted by Dr Paul van der Moezel of PGV Environmental on 24 and 25 September 2020 and 16 October.

Most of the site was thoroughly walked to record all species in the survey area. Information on flora composition and vegetation structure was recorded in 10m x 10m non-permanent quadrats in representative vegetation types. Access was not possible on several lots. In addition, lots without any native vegetation or no intact native vegetation were sometimes observed from a neighbouring property rather than requiring direct access onto the lot.

Areas of intact native vegetation in good condition or better were walked along a series of 20m traverses to identify any of the smaller flowered species, particularly Threatened orchids, that could occur on the site.

Most plant species were identified in the field. Some specimens were photographed or taken for identification at the Perth Reference Herbarium or office using standard reference guides.

3.3 Survey Conditions

The conditions that the survey was undertaken in are presented in Table 2 in order to assess the adequacy of the survey. In summary, there were no constraints to the survey.

Table 2: Statement of Botanical Survey Conditions

Issue	Constraints (Y/N)*	Comment
Competency/experience of the consultant conducting the survey	No	Dr Paul van der Moezel has extensive botanical survey experience in the Perth Metropolitan Region.
Proportion of the flora identified^	No	The timing of the survey in late September was optimal to identify most flora species on the site including all potential Threatened and Priority Flora. No follow-up survey required.
Sources of information (historic/recent or new data)	No	The flora in the Perth Metropolitan Region is well documented.
Proportion of the task achieved and further work that may need to be undertaken	No	No follow-up survey required as no Threatened Flora expected to occur in other seasons.
Timing/weather/season/cycle	No	The spring survey was optimal for most flora species. 2020 was a good year for ephemeral species, including orchids.
Disturbances (Fire)	No	The fire age of the vegetation was mostly greater than 5 years apart from one small area on Lot 4 Coonadoo Court.
Intensity of survey (e.g. In retrospect was the intensity adequate)	No	The time spent on the site and ease of access made for a full coverage.
Completeness (e.g. was relevant area fully surveyed)	No	
Resources (e.g. degree of expertise available for plant identification)	No	Experienced botanist undertook most plant identifications on site.
Remoteness and/or access problems	No	Easily accessible site in the Perth Metropolitan Region.
Availability of contextual (e.g. bioregional) information for the study area.	No	Bush Forever

*Constraints have been rated as Significant, Moderate or No constraints

[^]Fungi and nonvascular flora (e.g. algae, mosses and liverworts) were not specifically surveyed for during the survey.

4 RESULTS

4.1 Flora Database Searches

The search of the DBCA Threatened Flora Databases: the WA Herbarium database (WAHerb), the Threatened (Declared Rare) and Priority Flora Species List (TFPL) (Appendix 1) and Naturemap (Appendix 2) indicates that a number of species that are listed as Endangered, Threatened or Priority have been recorded within a 10km radius of the site. The EPBC Act Protected Matters Search Tool (Appendix 3) identifies species listed under the EPBC Act as potentially having habitat in the area. The results from these database searches are shown in Table 3. None of the species has been recorded from the survey area.

Table 4 lists the likelihood that any of these species could occur on the site based on the soil types and vegetation condition. Species of fungi have been excluded as fungi were not included in the survey.

Table 3: Conservation Significant Flora Identified in Database Searches

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Austrostipa jacobsiana</i>		Schedule 1	Critically Endangered
<i>Caladenia huegelii</i>	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	Schedule 1	Endangered
<i>Drakaea elastica</i>	Glossy-leaved Hammer Orchid	Schedule 1	Endangered
<i>Synaphea</i> sp. Fairbridge Farm (D Papenfus 696)	Selena's Synaphea	Schedule 1	Critically Endangered
<i>Theelymitra dedmaniarum</i>	Cinnamon Sun-orchid	Schedule 1	Endangered
<i>Diuris purdiei</i>	Purdie's Donkey-orchid	Schedule 2	Endangered
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Schedule 2	Vulnerable
<i>Eremophila glabra</i> subsp. <i>chlorella</i>		Schedule 2	Endangered
<i>Lepidosperma rostratum</i>	Beaked Lepidosperma	Schedule 2	Endangered
<i>Andersonia gracilis</i>	Slender Andersonia	Schedule 3	Endangered
<i>Diuris drummondii</i>	Tall Donkey Orchid	Schedule 3	Vulnerable
<i>Diuris micrantha</i>	Dwarf Bee-orchid	Schedule 3	Vulnerable
<i>Eleocharis keigheryi</i>	Keighery's Eleocharis	Schedule 3	Vulnerable
<i>Acacia lasiocarpa</i> var. <i>bracteolata</i> long peduncle variant (G.J. Keighery 5026)		Priority 1	
<i>Hydrocotyle striata</i>		Priority 1	
<i>Acacia benthamii</i>		Priority 2	
<i>Levenhookia pulcherrima</i>	Beautiful Stylewort	Priority 2	
<i>Poranthera moorokatta</i>		Priority 2	
<i>Stenanthesum sublineare</i>		Priority 2	
<i>Theelymitra variegata</i>	Queen of Sheba	Priority 2	

Scientific Name	Common Name	Conservation Status (WA)	Status under EPBC Act
<i>Thysanotus</i> sp. Badgingarra (E.A. Griffin 2511)		Priority 2	
<i>Angianthus micropodioides</i>		Priority 3	
<i>Byblis gigantea</i>	Rainbow Plant	Priority 3	
<i>Cyathochaeta teretifolia</i>		Priority 3	
<i>Dampiera triloba</i>		Priority 3	
<i>Eryngium pinnatifidum</i> subsp. <i>Palustre</i> (G.J. Keighery 13459)		Priority 3	
<i>Jacksonia gracillima</i>		Priority 3	
<i>Meionectes tenuifolia</i>		Priority 3	
<i>Phlebocarya pilosissima</i> subsp. <i>pilosissima</i>		Priority 3	
<i>Pimelea calcicola</i>		Priority 3	
<i>Pithocarpa corymbulosa</i>		Priority 3	
<i>Schoenus benthamii</i>		Priority 3	
<i>Schoenus capillifolius</i>		Priority 3	
<i>Schoenus pennisetis</i>		Priority 3	
<i>Stylium aceratum</i>		Priority 3	
<i>Stylium paludicola</i>		Priority 3	
<i>Styphelia filifolia</i>		Priority 3	
<i>Thysanotus anceps</i>		Priority 3	
<i>Aponogeton hexatepalus</i>	Stalked Water Ribbons	Priority 4	
<i>Dodonaea hackettiana</i>	Hackett's Hopbush	Priority 4	
<i>Drosera occidentalis</i>	Western Sundew	Priority 4	
<i>Hydrocotyle lemnoides</i>	Aquatic Pennywort	Priority 4	
<i>Jacksonia sericea</i>	Waldjumi	Priority 4	
<i>Kennedia beckxiana</i>	Cape Arid Kennedia	Priority 4	
<i>Microtis quadrata</i>	South Coast Mignonette Orchid	Priority 4	
<i>Ornduffia submersa</i>		Priority 4	
<i>Stylium longitubum</i>	Jumping Jacks	Priority 4	
<i>Thysanotus glaucus</i>		Priority 4	
<i>Tripterococcus</i> sp. Brachylobus (A.S. George 14234)		Priority 4	
<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i>		Priority 4	

Conservation Codes are shown in Appendix 4

Table 4: Likelihood of Identified Significant Flora Species Occurring on the Site

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Austrostipa jacobsiana</i>		<i>Austrostipa jacobsiana</i> occurs on a roadside on coastal plain in dry white/grey sand, well drained (Western Australian Herbarium, 2003).	Highly Unlikely
<i>Caladenia huegelii</i>	King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid	The Grand Spider-orchid prefers sand or clay loam. This species generally does not survive in disturbed areas.	Possible in areas of good quality vegetation on dry sandy soils
<i>Drakaea elastica</i>	Glossy-leaved Hammer Orchid	The Glossy-leaved Hammer Orchid prefers low-lying situations adjoining winter-wet swamps. This species does not survive in disturbed areas.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Synaphea</i> sp. Fairbridge Farm (D Papenfus 696)	Selena's Synaphea	Selena's Synaphea occurs in sandy with lateritic pebbles near winter-wet flats, in low woodland with weedy grasses.	Highly Unlikely, not suitable soil type
<i>Thelymitra dedmaniarum</i>	Cinnamon Sun-orchid	Cinnamon sun orchid is known from only two locations in the Gidgegannup area. It is confined to open wandoo woodland on red-brown sandy loam associated with dolerite and granite outcropping (DEC, 2012).	No, not suitable soil type
<i>Diuris purdiei</i>	Purdie's Donkey-orchid	Purdie's Donkey Orchid occurs in grey-black sand in moist winter-wet swamps.	Highly Unlikely, as areas of winter-wet wetland vegetation in good quality are very few.
<i>Drakaea micrantha</i>	Dwarf Hammer-orchid	Dwarf Hammer-orchid occurs in grey sands over dark, grey to blackish, sandy clay-loam substrates in winter wet depressions or swamps.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Eremophila glabra</i> subsp. <i>chlorella</i>		<i>Eremophila glabra</i> subsp. <i>chlorella</i> occurs in sandy clay in winter-wet depressions.	Highly Unlikely, as areas of winter-wet wetland vegetation on clay soils unlikely to be present.
<i>Lepidosperma rostratum</i>	Beaked Lepidosperm a	Beaked Lepidosperma is found in peaty sand, clay.	Highly Unlikely, as areas of winter-wet wetland vegetation with peaty sandy soils unlikely to be present.

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Andersonia gracilis</i>	Slender Andersonia	Slender Andersonia occurs in white/grey sand, sandy clay, gravelly loam in winter-wet areas, near swamps.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Diuris drummondii</i>	Tall Donkey Orchid	The Tall Donkey Orchid grows in low-lying depressions, swamps.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Diuris micrantha</i>	Dwarf Bee-orchid	The Dwarf Bee-orchid is usually found on cleared firebreaks or open sandy patches that have been disturbed within Jarrah Banksia woodland or thickets of Spearwood (<i>Kunzea ericifolia/glabrescens</i>) (Williams et al., 2001).	Possible
<i>Eleocharis keigheryi</i>	Keighery's Eleocharis	Keighery's Eleocharis occurs in clay, sandy loam and is emergent in freshwater: creeks, claypans.	Highly Unlikely, as site unlikely to have claypans and creeks are not present.
<i>Acacia lasiocarpa</i> var. bracteolata long peduncle variant (G.J. Keighery 5026)		This variant of <i>Acacia lasiocarpa</i> occurs in grey or black sand over clay in swampy areas, winter wet lowlands.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Hydrocotyle striata</i>		<i>Hydrocotyle striata</i> occurs in clay near springs.	Highly Unlikely, as site unlikely to have claypans.
<i>Acacia benthamii</i>		<i>Acacia benthamii</i> grows on sand, typically on limestone breakaways	Highly Unlikely as no limestone soils or breakaways on site
<i>Levenhookia pulcherrima</i>	Beautiful Stylewort	Beautiful Stylewort grows in sand.	Possible
<i>Poranthera moorokatta</i>		<i>Poranthera moorokatta</i> grows in white silica sand and has been recorded in Banksia woodland and in a shallow dampland (Barrett, 2012).	Possible
<i>Stenanthemum sublineare</i>		<i>Stenanthemum sublineare</i> grows in littered white sand on coastal plain.	Unlikely, unsuitable soil type
<i>Thelymitra variegata</i>	Queen of Sheba	The Queen of Sheba orchid grows on sandy clay, sand and laterite.	No, unsuitable soil type
<i>Thysanotus</i> sp. Badgingarra (E.A. Griffin 2511)		<i>Thysanotus</i> sp. Badgingarra grows in grey sand with lateritic gravel.	No, unsuitable soil type

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Angianthus micropodioides</i>		<i>Angianthus micropodioides</i> occurs in saline sandy soils on river edges, saline depressions, claypans.	No, unsuitable soil type
<i>Byblis gigantea</i>	Rainbow Plant	The Rainbow Plant occurs in sandy-peat swamps in seasonally wet areas.	Highly Unlikely, as site unlikely to have sandy peat swamps
<i>Cyathochaeta teretifolia</i>		<i>Cyathochaeta teretifolia</i> occurs in grey sand, sandy clay on swamps, creek edges.	Possible
<i>Dampiera triloba</i>		<i>Dampiera triloba</i> grows in loamy sand (Australian National Herbarium, 2009)	No, unsuitable soil type
<i>Eryngium pinnatifidum</i> subsp. Palustre (G.J. Keighery 13459)		<i>Eryngium pinnatifidum</i> subsp. Palustre is recorded from a winter wet claypan, water to 20 cm deep in grey-brown clay (Western Australian Herbarium, 1989)	Highly Unlikely, as site unlikely to have claypans
<i>Jacksonia gracillima</i>		<i>Jacksonia gracillima</i> occurs in grey and brown well-drained sand.	Possible
<i>Meionectes tenuifolia</i>		<i>Meionectes tenuifolia</i> occurs on swamp margins (Western Australian Herbarium, 2011)	Possible
<i>Phlebocarya pilosissima</i> subsp. <i>pilosissima</i>		<i>Phlebocarya pilosissima</i> subsp. <i>pilosissima</i> grows in white or grey sand, lateritic gravel.	Possible
<i>Pimelea calcicola</i>		<i>Pimelea calcicola</i> occurs in sand on coastal limestone ridges.	Unlikely, no limestone ridges on the site and the site is not coastal
<i>Pithocarpa corymbulosa</i>		<i>Pithocarpa corymbulosa</i> occurs in gravelly or sandy loam amongst granite outcrops.	No, unsuitable soil type
<i>Schoenus benthamii</i>		<i>Schoenus benthamii</i> prefers white, grey sand, sandy clay in winter-wet flats, swamps.	Possible
<i>Schoenus capillifolius</i>		<i>Schoenus capillifolius</i> grows in brown mud on claypans.	Highly Unlikely, as site unlikely to have claypans
<i>Schoenus pennisetis</i>		<i>Schoenus pennisetis</i> occurs in grey or peaty sand, sandy clay in swamps, winter-wet depressions.	Unlikely, as areas of wetland vegetation in good quality are very few.

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Stylium aceratum</i>		<i>Stylium aceratum</i> occurs in sandy soils in swamp heathland.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Stylium paludicola</i>		<i>Stylium paludicola</i> prefers peaty sand over clay in winter wet habitats in Marri and Melaleuca woodland, Melaleuca shrubland.	Possible
<i>Styphelia filifolia</i>		<i>Styphelia filifolia</i> occurs in sandy soils of the coastal plain (with one known occurrence from the northern Darling Scarp), usually in Banksia or Jarrah woodland and in low-lying situations (Hislop and Lelièvre, 2017).	Possible
<i>Thysanotus anceps</i>		<i>Thysanotus anceps</i> grows on white or grey sand, lateritic gravel, laterite.	Possible
<i>Aponogeton hexatepalus</i>	Stalked Water Ribbons	Stalked Water Ribbons grow in freshwater: ponds, rivers, claypans	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Dodonaea hackettiana</i>	Hackett's Hopbush	Hackett's Hopbush occurs in sand with outcropping limestone.	Unlikely, no limestone on the site
<i>Drosera occidentalis</i>	Western Sundew	The Western Sundew occurs in sandy and clayey soils in swamps and wet depressions.	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Hydrocotyle lemnoides</i>	Aquatic Pennywort	Aquatic Pennywort occurs in swamps	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Jacksonia sericea</i>	Waldjumi	Waldjumi grows in calcareous and sandy soils.	Possible
<i>Kennedia beckxiana</i>	Cape Arid Kennedia	Cape Arid Kennedia occurs in sand, loam on granite hills and outcrops.	No, unsuitable soil type
<i>Microtis quadrata</i>	South Coast Mignonette Orchid	South Coast Mignonette Orchid occurs on clay based coastal flats (Brown et al., 2013).	No, the site is not coastal
<i>Ornduffia submersa</i>		<i>Ornduffia submersa</i> grows in freshwater 0.05-0.6 m deep. Pools, lakes, swamps, winter-wet depressions, claypans.	Unlikely, wetland type unlikely to be present

Scientific Name	Common Name	Habitat*	Likelihood to occur on the site
<i>Stylium longitubum</i>	Jumping Jacks	Jumping Jacks prefer sandy clay, clay in seasonal wetlands.	Unlikely, clay wetland type unlikely to be present
<i>Thysanotus glaucus</i>		<i>Thysanotus glaucus</i> occurs in white, grey or yellow sand, sandy gravel.	Possible
<i>Tripterooccus</i> sp. <i>Brachylobus</i> (A.S. George 14234)		<i>Tripterooccus</i> sp. <i>Brachylobus</i> occurs in grey, black or peaty sand winter-wet flats	Unlikely, as areas of wetland vegetation in good quality are very few.
<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i>		<i>Verticordia lindleyi</i> subsp. <i>lindleyi</i> prefers sand, sandy clay in winter-wet depressions.	Unlikely, as areas of wetland vegetation in good quality are very few.

* sourced from Florabase (DBCA, 2017) and SPRAT Database (DoEE, 2016) as well as the DBCA database searches unless otherwise denoted

4.2 TEC and PEC Desktop Search

A search of DBCA's Threatened (TEC) and Priority Ecological Communities (PEC) database was conducted within a radius of 5km around the site (14-1020EC) (Appendix 5). Four TECs and eight PECs at State level were identified in the database search. There are five State listed PECs are listed under the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) as TECs. The communities identified in the database searches are outlined in Table 5. The mound spring, Muchea limestone, claypan, wooded waterbird wetlands and saltmarsh communities would not occur on the site.

Table 5: Threatened and Priority Ecological Communities likely to occur within 5km of the Site

Ecological Community	Description	Conservation Status WA	Status under the EPBC Act
Mound Springs SCP	Communities of Tumulus Springs (Organic Mound Springs, Swan Coastal Plain)	Critically Endangered	Endangered
SCP10a	Shrublands on dry clay flats (floristic community type 10a as originally described in Gibson <i>et al.</i> (1994))	Endangered	Critically Endangered as part of the Claypans SCP
Muchea Limestone	Shrublands and woodlands on Muchea Limestone of the Swan Coastal Plain	Endangered	Endangered
SCP08	Herb rich shrublands in clay pans (floristic community type 8 as originally described in Gibson <i>et al.</i> (1994))	Vulnerable	Critically Endangered as part of the Claypans SCP
Claypans with shrubs over herbs	Claypans with mid dense shrublands of <i>Melaleuca lateritia</i> over herbs	Priority 1	Critically Endangered as part of the Claypans SCP

Ecological Community	Description	Conservation Status WA	Status under the EPBC Act
Wooded waterbird wetlands	Wooded wetlands which support colonial waterbird nesting areas	Priority 2	
SCP24	Northern Spearwood shrublands and woodlands	Priority 3	
SCP21c	Low lying <i>Banksia attenuata</i> woodlands or shrublands	Priority 3	Endangered as part of the Banksia WL SCP
Coastal Saltmarsh	Subtropical and Temperate Coastal Saltmarsh	Priority 3	Vulnerable
Banksia WL SCP	Banksia Dominated Woodlands of the Swan Coastal Plain IBRA Region	Priority 3	Endangered
Tuart woodlands	Tuart (<i>Eucalyptus gomphocephala</i>) woodlands and forests of the Swan Coastal Plain	Priority 3	Critically Endangered
SCP22	<i>Banksia ilicifolia</i> woodlands	Priority 3	Endangered as part of the Banksia WL SCP

4.3 Flora

A total of 166 plant species were recorded during the 2020 flora survey (Appendix 6). This total consisted of 134 native species and 32 (19%) introduced species. The number of native species is considered to be expected for the range of vegetation types, vegetation condition and overall amount of vegetation in the survey area.

The plant Families with the highest representation of species were the Fabaceae (Pea and Wattle family – 18 species, including 15 native and 3 introduced) Myrtaceae (Myrtle family - 17 species, all native), Asteraceae (Daisy family – 16 species, 9 native and 7 introduced), Orchidaceae (Orchid family – 10 species, all native), Proteaceae (Banksia family – 9 species, all native) and the Poaceae (Grass family – 9 species, 1 native and 8 introduced).

Quadrat Data are provided in Appendix 7.

Species richness in the quadrats ranged from 12 to 46 with the highest species richness in the vegetation in Very Good condition or better on dry sandy soils (41 species average). The lower values of species richness were in the poorer quality vegetation on low-lying wetland soils.

There were no Threatened (Declared Rare) or Priority plant species recorded on the site.

4.4 Vegetation

4.4.1 General Description

The site has mostly been cleared in the past and subdivided into small rural landholdings. Some intact native vegetation has been retained on some lots, particularly on the western side of the site. Many lots contain some native trees in a parkland cleared condition with grazed or mowed non-native understorey. All lots contain some planted non-native trees and shrubs around the houses and sheds.

4.4.2 Vegetation Complex

Vegetation Complexes are a broad level of vegetation description which is based on the underlying geomorphology and rainfall (Heddle *et al.*, 1980). The areas of remnant native vegetation on the site are part of the Bassendean– Central and South vegetation complex which is described as:

Bassendean Complex-Central and South - Vegetation ranges from woodland of Jarrah (*Eucalyptus marginata*) – Sheoak (*Allocasuarina fraseriana*) – Banksia (*Banksia spp.*) to low woodland of Paperbark (*Melaleuca spp.*), and sedgelands on moister sites (Heddle *et al.*, 1980).

The general description of the vegetation complex matches the different types of native vegetation remaining on the site.

4.4.3 Vegetation Type

For small scale sites, such as the survey area, vegetation mapping can be further refined by using vegetation types which are described by the composition and structure of the dominant species rather than based on geomorphology.

A total of nine native vegetation types were described and mapped on the site. The vegetation types are described in Table 6 and mapped in Figure 3.

Three vegetation types were recorded and mapped on elevated land while the other six vegetation types were recorded on lower lying areas of the site.

Table 6: Vegetation Types on the Site

Vegetation Type	Description	Photograph
BaBm¹ <i>Banksia attenuata/B. menziesii/Nuytsia floribunda/Eucalyptus todtiana</i> Low open Woodland over <i>Allocasuarina humilis/</i> <i>Eremaea pauciflora/</i> <i>Hibbertia hypericoides</i> Open to Closed Low Heath	<p>This is the main intact native vegetation type on the site, occurring predominantly on the western and northwestern perimeter of the site. <i>Banksia attenuata</i> and <i>Banksia menziesii</i> occur in mixed abundance with some areas containing very few mature trees, possibly a result of dieback or water table decline over the years. Christmas Tree (<i>Nuytsia floribunda</i>) and <i>Eucalyptus todtiana</i> are common trees in the vegetation type. Common understorey species include <i>Allocasuarina humilis</i>, <i>Eremaea pauciflora</i>, <i>Hibbertia hypericoides</i>, <i>Gompholobium tomentosum</i>, <i>Burkardia congesta</i>, <i>Dasygordon bromeliifolius</i>, <i>Dampiera linearis</i>, <i>Amphipogon turbinatus</i>, <i>Caladenia flava</i>, <i>Trachymene pilosa</i> and <i>Thysanotus patersonii</i>.</p> <p>The soils are brownish grey sand.</p> <p>Quadrats JR2, 3, 8 and 10 are representative of this vegetation type.</p>	
BaBm² Very scattered individuals of <i>Banksia attenuata/B. menziesii/Nuytsia floribunda/Eucalyptus todtiana</i> over <i>Allocasuarina humilis/Eremaea pauciflora/</i> <i>Hibbertia hypericoides</i> Open to Closed Low Heath	<p>This vegetation type is very similar to BaBm1 with respect to the composition of the low heath vegetation but has very scattered individuals of <i>Banksia attenuata</i>, <i>B. menziesii</i>, <i>Nuytsia floribunda</i> and/or <i>Eucalyptus todtiana</i>. The paucity of trees may be due to past clearing or long-term reduction in numbers due to dieback or water table decline.</p>	

Vegetation Type	Description	Photograph
Af <i>Allocasuarina fraseriana/ Melaleuca preissiana/ Eucalyptus todtiana/Banksia ilicifolia</i> Low Open Woodland over <i>Xanthorrhoea preissii</i> Open Low Heath	<p>This vegetation type occurred in the north-west part of the site on relatively low-lying land. The dominant trees were Sheoak (<i>Allocasuarina fraseriana</i>), with <i>Eucalyptus todtiana</i>, <i>Banksia ilicifolia</i> and occasionally <i>Melaleuca preissiana</i> also present. <i>Xanthorrhoea preissii</i> was a common understorey species.</p> <p>The soils are dark grey sand.</p> <p>Quadrat JR5 is representative of this vegetation type.</p>	
MpBm <i>Melaleuca preissiana/Banksia menziesii</i> Low Open Woodland over <i>Beaufortia squarrosa/ Astartea affinis</i> Open Heath	<p>One very small area of this vegetation type was recorded on Lot 20 Boeing Way. The presence of Paperbark trees (<i>Melaleuca preissiana</i>), <i>Astartea affinis</i> and <i>Pultenaea reticulata</i> suggest a small area of wetland. However, the presence of <i>Banksia menziesii</i> and many other dryland shrub species indicates the site is transitional between wetland and dryland. The soil type is brownish grey sand.</p> <p>Quadrat JR1 is representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
MpHa <i>Melaleuca preissiana</i> Low Open Woodland over <i>Hypocalymma angustifolium</i> / <i>Astartea affinis</i> Closed Heath	<p>Two small areas of this vegetation type were mapped on the site, one with few <i>M. preissiana</i> trees and the other with the trees more common. The vegetation type is dominated by the wetland shrub <i>Hypocalymma angustifolium</i> with other wetland indicator species present including <i>Pericalymma ellipticum</i>, <i>Astartea affinis</i> and <i>Boronia spathulata</i>. The area mapped in the north-west corner of the site on Lots 25 and 26 Boeing Way represent new locations of wetlands in the area. The soil type is dark grey sand.</p> <p>Quadrats JR4 and 9 are representative of this vegetation type.</p>	
MpKg <i>Melaleuca preissiana</i> Low Open Woodland over <i>Kunzea glabrescens</i> / <i>Adenanthes cygnorum</i> Tall Shrubland over weeds	<p>One small stand of this vegetation type occurred at the north-east end of the site on the margin of wetland 6780. The Paperbark (<i>Melaleuca preissiana</i>) and Spearwood (<i>Kunzea glabrescens</i>) trees are up to 4m high with <i>Banksia ilicifolia</i> and <i>Adenanthes cygnorum</i> also present as well as the introduced Sydney Wattle (<i>Acacia longifolia</i>). <i>Hypocalymma angustifolium</i> and <i>Astartea affinis</i> are present but not widespread. The surface soils are black sand.</p> <p>Quadrat JR6 is representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
Kg <i>Kunzea glabrescens</i> Tall Open Scrub over weeds	<p>Some moderately dense stands of Spearwood (<i>Kunzea glabrescens</i>) Scrub up to 4m high occurs at the north-east end of the site. <i>Kunzea glabrescens</i> occurs on the margins of wetlands. The presence of <i>Eucalyptus todtiana</i> indicates that the vegetation is transitional between wetland and dryland. The surface soils are dark grey sand.</p> <p>Quadrat JR7 is representative of this vegetation type.</p>	
Er <i>Eucalyptus rudis</i> Low Woodland over <i>Astartea affinis</i> Open Shrubland over weeds	<p>This vegetation type is associated with wetland 6881. The central core of the wetland contains <i>Eucalyptus rudis</i> (Flooded Gum) trees up to 8m high over a mixed understorey that is very weedy in places and with some native heath vegetation in others. Common native species in the better quality areas include <i>Astartea affinis</i>, <i>Acacia pulchella</i> and <i>Lepidosperma longitudinale</i>. Areas away from the core wetland contain Flooded Gum trees over a parkland cleared or grassy weed understorey. The soil types are brown sand.</p> <p>Quadrat JR11 is representative of this vegetation type.</p>	

Vegetation Type	Description	Photograph
Mp Parkland Cleared <i>Melaleuca preissiana</i> Trees	<p>Several properties at the eastern end of the site contain scattered Paperbark trees (<i>Melaleuca preissiana</i>) over a completely cleared and grazed or mowed understorey. These areas have wetland soils that are typically waterlogged in an average year.</p>	

4.4.4 Vegetation Condition

The condition of the vegetation was assessed according to the system of Keighery as described in Bush Forever (Government of Western Australia, 2000) (Table 7).

Table 7: Vegetation Condition Rating Scale

Condition	Description
Pristine	Pristine or nearly so, no obvious signs of disturbance.
Excellent	Vegetation structure intact, disturbance affecting individual species and weeds are non-aggressive species.
Very Good	Vegetation structure altered, obvious signs of disturbance. For example, disturbance to vegetation structure caused by repeated fires, the presence of some more aggressive weeds, dieback, logging and grazing.
Good	Vegetation structure significantly altered by very obvious signs of multiple disturbance. Retains basic vegetation structure or ability to regenerate to it. For example, disturbance to vegetation structure caused by very frequent fires, the presence of some very aggressive weeds at high density, partial clearing, dieback and grazing.
Degraded	Basic vegetation structure severely impacted by disturbance. Scope for regeneration but not to a state approaching good condition without intensive management. For example, disturbance to vegetation structure caused by very frequent fires, the presence of very aggressive weeds, partial clearing, dieback and grazing.
Completely Degraded	The structure of the vegetation is no longer intact and the area is completely or almost completely without native species. These are often described as ‘parkland cleared’ with the flora comprising weed or crop species with isolated native trees or shrubs.

The condition of the vegetation is shown in Figure 3. Vegetation condition ranged from Excellent to Completely Degraded. The areas of Excellent vegetation were limited to some of the Banksia woodland (BaBm¹) vegetation at the western end of the site and one area on Lot 4 Coonadoo Court. Areas with high quality heath vegetation but with very few trees (BaBm² unit) were rated as Very Good. Parkland cleared areas with Banksia/Eucalyptus/Nuytsia trees are Completely Degraded.

Only one small area of wetland vegetation (MpHa) on Lots 25 and 26 Boeing Way was rated as Excellent. All other areas were Completely Degraded to Good due to most areas being parkland cleared for grazing or the wetter soils being more susceptible to invasion by weed species.

4.5 Conservation Significance of Flora and Vegetation

4.5.1 Flora

No Threatened or Priority flora species were recorded on the site. No other species of conservation significance were recorded.

4.5.2 Vegetation

Vegetation Complex

The vegetation on the site is part of the Bassendean - Central and South Vegetation Complex. There is approximately 23,509ha (26.87%) of the pre-European extent of the Bassendean Complex-Central and South remaining on the Swan Coastal Plain portion of the Perth Metropolitan Region (DBCA, 2018). There is 1,625ha in secure reserves which is 1.86% of the original extent of the complex (DBCA, 2018).

The percentage retention is above the EPA's target for minimum 10% retention of vegetation complexes in the Perth and Peel Region Constrained Areas. The amount protected in secure reserves, however, is low.

Floristic Community Type

Floristic Community Types (FCT) are based on the floristic composition of all the species in a vegetation type rather than being determined by the nature of the dominant species (Vegetation Types) or the underlying soil type and geomorphology (Vegetation Complex).

The *Banksia attenuata/B. menziesii* vegetation type (BaBm¹) and the *Allocasuarina fraseriana*-dominated woodland (Af) vegetation types were inferred as being FCT 23a 'Central *Banksia attenuata* – *B. menziesii* woodlands' based on the composition of the flora in the quadrats sampled from the vegetation types. The BaBm² vegetation type was also inferred as being FCT23a despite the absence or very low density of *Banksia attenuata* and *B. menziesii* trees. The absence or low density of Banksia trees does not have a big impact on the identification of the FCT as the FCT is based on the whole assemblage of plant species and not just the dominant tree canopy.

FCT23a is one of the most common Banksia Woodland FCTs, occurring from Bullsbrook south to Woodman Point. The FCT is not a Threatened or Priority Ecological Community in its own right but may be part of the broader Banksia Woodlands of the Swan Coastal TEC listed under the EPBC Act. Further assessment of the Banksia Woodland TEC is provided below.

Only vegetation in Good condition or better is able to be identified as a Floristic Community Type. Vegetation in Degraded and Completely Degraded condition have too few native species to compare accurately with the FCT descriptions of Gibson *et al.* (1994). Therefore, almost all the vegetation other than the Banksia woodlands was not able to be assigned to a FCT. The small area of MpHa wetland vegetation on Lots 25 and 26 Boeing Way is inferred as being FCT 5 'mixed shrub damplands'. FCT 5 is not a TEC or PEC.

Banksia Woodland TEC Assessment

The Banksia Woodlands of the Swan Coastal Plain Threatened Ecological Community (Banksia Woodland TEC) is listed as an Endangered TEC under the Commonwealth EPBC Act. The Banksia Woodland community is a conglomerate of a number of Banksia-dominated FCTs recognised at State level. FCT 23a is one of the FCTs that form part of the Banksia Woodland TEC. However, the identification of one of the relevant FCTs on a site is not of itself sufficient to assign the vegetation to the Banksia Woodland TEC. The vegetation needs to meet specific criteria to be considered the TEC.

The Approved Conservation Advice (incorporating listing advice) for the Banksia Woodlands of the Swan Coastal Plain ecological community (Commonwealth of Australia, 2016) (Conservation Advice) describes the Banksia Woodland TEC as:

The ecological community is a woodland associated with the Swan Coastal Plain of southwest Western Australia. A key diagnostic feature is a prominent tree layer of Banksia, with scattered eucalypts and other tree species often present among or emerging above the Banksia canopy. The understorey is a species rich mix of sclerophyllous shrubs, graminoids and forbs. The ecological community is characterised by a high endemism and considerable localised variation in species composition across its range (Commonwealth of Australia, 2016).

Table 8 assesses the vegetation type on the site against the Banksia Woodland TEC criteria contained in the Conservation Advice.

Table 9 summarises the assessment with respect to Banksia Woodland TEC on each lot in the survey area.

In summary, the areas of BaBm¹ vegetation type in Excellent and Very Good condition meet all the requirements of the Banksia Woodland TEC. Most of these areas are considered one patch of around 5.6ha on the western end of the site as the areas on each lot are only separated by perimeter firebreaks which provide a gap of only 7m, which is well under the 30m allowable separation distance within a patch of the TEC. One isolated patch of the TEC around 1.4ha in size occurs on Lot 4 Coonadoo Court.

A total of around 7.42ha of Banksia Woodland TEC is mapped on the site.

The areas containing BaBm¹ vegetation in Degraded condition are not considered to be the TEC due to the degraded condition of the vegetation not meeting the minimum condition threshold for the TEC.

The areas containing BaBm² vegetation type with very few to no Banksia trees are not considered the TEC due to the lack of Banksia trees as a prominent tree layer. The three areas of this vegetation type on Boeing Way (Lots 27, 28 and 29) total around 1.8ha which is below the threshold 2ha for vegetation in Good condition to be the TEC.

Table 8: Assessment of the Banksia Woodland of the Swan Coastal Plain TEC.

Feature	Characteristic	Vegetation Type	
		BaBm ¹	BaBm ²
		<i>Banksia attenuata/B. menziesii/ Nuytsia floribunda/Eucalyptus todtiana</i> Low open Woodland over <i>Allocasuarina humilis/Eremaea pauciflora/Hibbertia hypericoides</i> Open to Closed Low Heath	Very scattered individuals of <i>Banksia attenuata/B. menziesii/ Nuytsia floribunda/Eucalyptus todtiana</i> over <i>Allocasuarina humilis/Eremaea pauciflora/Hibbertia hypericoides</i> Open to Closed Low Heath
Banksia Species	The patch must include at least one of the following diagnostic species: <ul style="list-style-type: none"> • <i>Banksia attenuata</i> (Candlestick Banksia) • <i>Banksia menziesii</i> (Firewood Banksia) • <i>Banksia prionotes</i> (Acorn Banksia) • <i>Banksia ilicifolia</i> (Holly-Leaved Banksia). 	<i>Banksia attenuata</i> and <i>B. menziesii</i> common.	<i>Banksia attenuata</i> and/or <i>B. menziesii</i> usually present.
Vegetation Structure	<ul style="list-style-type: none"> • A distinctive upper sclerophyllous layer of low trees (occasionally large shrubs more than 2 m tall), typically dominated or codominated³ by one or more of the <i>Banksia</i> species (<i>B. attenuata</i>, <i>B. menziesii</i>, <i>B. ilicifolia</i>, <i>B. prionotes</i>); • An emergent tree layer of medium or tall (>10 m) height <i>Eucalyptus</i> or <i>Allocasuarina</i> (Sheoak) species may sometimes be present above the <i>Banksia</i> canopy. • An understory that is often highly species-rich consists of: <ul style="list-style-type: none"> - A layer of sclerophyllous shrubs of various heights; and, - A herbaceous ground layer of cord rushes, sedges and perennial and ephemeral forbs, that sometimes includes grasses. The development of a ground layer may vary depending on the density of the shrub layer and disturbance history. 	<ul style="list-style-type: none"> • Banksia trees form a distinctive upper layer of low trees in these vegetation types, often with WA Christmas Tree (<i>Nuytsia floribunda</i>) and <i>Eucalyptus todtiana</i>. • <i>Eucalyptus todtiana</i> is sometimes co-dominant but not emergent in these vegetation types. • Understorey of shrubs, sedges, herbs in Excellent to Good condition have a moderate diversity of native species including shrubs, sedges, climbing plants and ephemerals. Some areas have a Degraded to Completely Degraded understorey with few native species. 	<ul style="list-style-type: none"> • Banksia trees are very sparse and do not form a distinctive upper layer of trees. • Trees are very sparse and emergent tree layer not present • Understorey of shrubs, sedges, herbs, in Good condition have a moderate diversity of native species including shrubs, sedges, climbing plants and ephemerals. Completely Degraded areas have very few native species.
Vegetation Condition	An area of Banksia woodland needs to be at least in Good condition to be considered the TEC.	Vegetation types range from Excellent to Completely Degraded.	Vegetation types range from Good to Completely Degraded
Patch Size	The Banksia woodland TEC needs to meet a minimum 'patch' size depending on its condition to qualify as the TEC, as follows: <ul style="list-style-type: none"> • 'Pristine' – no minimum patch size • 'Excellent' – 0.5ha • 'Very Good' – 1ha • 'Good' – 2ha 	Three patches of Very Good to Excellent vegetation range from 5.6ha, 1.4ha and 0.2ha.	Only patch in Good condition is 1.8ha.
Conclusion		Most areas in Excellent to Good condition meet all the required criteria. One isolated patch in Very Good condition on Lot 19 Boeing Way too small to be the TEC	Does not meet all the criteria to be the TEC including a lack of Banksia trees as a dominant tree canopy and the size of the areas in Good condition being below the threshold.

Table 9: Assessment of Banksia Woodland TEC on Individual Lots

Lot Number	Vegetation Type	Vegetation Condition	Banksia Woodland TEC
Lot 19 Boeing Way	BaBm ¹ (front) BaBm ¹ (back) BaBm ² (back)	Very Good Very Good Completely Degraded	Yes No (too small) No
Lot 20 Boeing Way	BaBm ¹	Excellent	Yes
Lot 21 Boeing Way	BaBm ¹	Excellent	Yes
Lot 22 Boeing Way	BaBm ¹	Excellent and Good	Yes
Lot 23 Boeing Way	BaBm ¹	Excellent and Very Good	Yes
Lot 24 Boeing Way	BaBm ¹	Excellent	Yes
Lot 25 Boeing Way	BaBm ¹	Good	Yes, considered part of woodland on Lot 24
Lot 26 Boeing Way	BaBm ¹	Degraded	No
Lot 27 Boeing Way	BaBm ²	Good	No
Lot 28 Boeing Way	BaBm ²	Good	No
Lot 29 Boeing Way	BaBm ²	Good	No
Lot 30 Boeing Way	BaBm ¹	Completely Degraded	No
Lot 32 Boeing Way	BaBm ¹	Completely Degraded	No
Lot 33 Boeing Way	BaBm ¹	Completely Degraded	No
Lot 4 Coonadoo Court	BaBm ¹	Excellent to Very Good (size 1.4ha)	Yes
Lot 5 Coonadoo Court	BaBm ²	Completely Degraded	No
Lot 300 Solomon Road	BaBm ¹	Degraded to Completely Degraded	No
Lot 5001 Solomon Road	BaBm ¹	Completely Degraded	No

5 SUMMARY AND CONCLUSIONS

The Flora and Vegetation survey resulted in the following findings:

- The site has mostly been cleared in the past and subdivided into small rural landholdings. Some intact native vegetation has been retained on some lots, particularly on the western side of the site. Many lots contain some native trees in a parkland cleared condition with little to no native understorey
- A total of 166 plant species were recorded during the 2020 flora survey. This total consisted of 134 native species and 32 introduced species;
- No Threatened (Declared Rare) or Priority flora species were recorded on the site;
- Nine native vegetation types were described and mapped on the site. Three vegetation types were recorded on elevated land while the other six vegetation types were recorded on lower lying areas of the site. The vegetation on the higher parts of the site was mostly a Banksia woodland with *Eucalyptus todtiana* and WA Christmas Tree also common. Some native Sheoak vegetation was also present. On some higher areas the tree species were either absent or very sparse which may be due to past clearing or the effects of dieback or water table decline. The lower lying vegetation was mostly associated with mapped wetlands and was in poor condition. One new wetland area at the rear of Lots 25 and 26 Boeing Way was recorded with dampland heath vegetation in Very Good condition;
- The vegetation condition ranged from Excellent at the western end to Completely Degraded over most of the lower-lying parts of the site;
- The vegetation is part of the Bassendean - Central and South Vegetation Complex which is above the minimum retention levels in the Perth Metropolitan Region but is poorly reserved;
- The upland vegetation is inferred as being Floristic Community Type (FCT) 23a '*Central Banksia attenuata – B. menziesii* woodlands' which is not a Threatened or Priority Ecological Community in its own right. The low-lying vegetation types are mostly too degraded to assign to an FCT. The small area of wetland vegetation on Lots 25 and 26 Boeing Way is considered to be FCT 5 'mixed shrub damplands' which is not a TEC or PEC; and
- The Banksia woodlands (BaBm¹ and BaBm²) were assessed against the criteria for the Federally listed TEC *Banksia Woodlands of the Swan Coastal Plain*. Most areas of BaBm1 vegetation in Good to Excellent condition were assessed as being part of the Banksia Woodland TEC. Areas containing the BaBm2 vegetation type were considered to not meet the criteria of the TEC due to the absence of Banksia trees as a dominant tree layer and the size of the areas being below the threshold minimum patch size. A total of 7.42ha of Banksia Woodland TEC occurs on the site.

TOTAL	1890	103756

Name ID	Species Name	Naturalised	Conservation Code	¹ Endemic To Query Area
---------	--------------	-------------	-------------------	------------------------------------

Rare or likely to become extinct

1. 38481 *Austrostipa jacobiana* T
2. 24345 *Botaurus poiciloptilus* (*Australasian Bittern*) T
3. 1596 *Caladenia huegelii* (*Grand Spider Orchid*) T
4. 24784 *Calidris ferruginea* (*Curlew Sandpiper*) T
5. 24790 *Calidris tenuirostris* (*Great Knot*) T
6. 24731 *Calyptorhynchus banksii* subsp. *naso* (*Forest Red-tailed Black Cockatoo*) T
7. 24733 *Calyptorhynchus baudinii* (*Baudin's Cockatoo, White-tailed Long-billed Black Cockatoo*) T
8. 24734 *Calyptorhynchus latirostris* (*Carnaby's Cockatoo, White-tailed Short-billed Black Cockatoo*) T
9. 48400 *Calyptorhynchus* sp. (*white-tailed black cockatoo*) T
10. 25575 *Charadrius leschenaultii* (*Greater Sand Plover*) T
11. 24092 *Dasyurus geoffroii* (*Chuditch, Western Quoll*) T
12. 10796 *Diuris drummondii* (*Tall Donkey Orchid*) T
13. 1637 *Diuris purdiei* (*Purdie's Donkey Orchid*) T
14. 1639 *Drakaea elastica* (*Glossy-leaved Hammer Orchid*) T
15. 13635 *Drakaea micrantha* T
16. 17150 *Eremophila glabra* subsp. *chlorella* T
17. 33983 *Leioproctus douglasiellus* (*a short-tongued bee*) T
18. 942 *Lepidosperma rostratum* T
19. 24146 *Myrmecobius fasciatus* (*Numbat, Walpurti*) T
20. 33984 *Neopasiphae simplicior* (*a short-tongued bee*) T
21. 48237 *Rostratula australis* (*Australian Painted Snipe*) T
22. 24145 *Setonix brachyurus* (*Quokka*) T
23. 18590 *Synaphea* sp. *Fairbridge Farm* (*D. Papenfus 696*) T
24. 34113 *Westrailunio carteri* (*Carter's Freshwater Mussel*) T

Protected under international agreement

25. 41323 *Actitis hypoleucus* (*Common Sandpiper*) IA
26. 25554 *Apus pacificus* (*Fork-tailed Swift, Pacific Swift*) IA
27. 25736 *Arenaria interpres* (*Ruddy Turnstone*) IA
28. 24779 *Calidris acuminata* (*Sharp-tailed Sandpiper*) IA
29. 24780 *Calidris alba* (*Sanderling*) IA
30. 24786 *Calidris melanotos* (*Pectoral Sandpiper*) IA
31. 24788 *Calidris ruficollis* (*Red-necked Stint*) IA
32. 24789 *Calidris subminuta* (*Long-toed Stint*) IA
33. 25574 *Charadrius dubius* (*Little Ringed Plover*) IA
34. 41332 *Chlidonias leucopterus* (*White-winged Black Tern, white-winged tern*) IA
35. 24791 *Gallinago hardwickii* (*Latham's Snipe, Japanese snipe*) IA
36. 24793 *Gallinago stenura* (*Pin-tailed Snipe*) IA

Other specially protected fauna

52.	<i>Falco peregrinus</i> (Peregrine Falcon)	S
53.	<i>Falco peregrinus</i> subsp. <i>macropus</i> (Australian Peregrine Falcon)	S

Priority 1

54.	<i>Acacia lasiocarpa</i> var. <i>bracteolata</i> long peduncle variant (G.J. Keighery 5026)	P1
55.	<i>Amanita quenda</i>	P1
56.	<i>Hydrocotyle striata</i>	P1
57.	<i>Throscocedes xiphos</i> (Stylet Bush Cricket, Stylet Throsco (Jandakot))	P1

Priority 2

58.	<i>Acacia benthamii</i>	P2
59.	<i>Amanita wadulawitu</i> (Long-spored Lepidella)	P2
60.	<i>Poranthera moorokatta</i>	P2
61.	<i>Stenantherum sublineare</i>	P2
62.	<i>Thelymitra variegata</i> (Queen of Sheba)	P2
63.	<i>Thysanotus</i> sp. Badgingarra (E.A. Griffin 2511)	P2

Priority 3

64.	<i>Acanthophis antarcticus</i> (Southern Death Adder)	P3
65.	<i>Amanita carneiphyllea</i>	P3
66.	<i>Amanita drummondii</i>	P3
67.	<i>Amanita fibrillosa</i>	P3
68.	<i>Amanita preissii</i> (Cinnamon-ring Lepidella)	P3
69.	<i>Amanita wadjujurum</i>	P3
70.	<i>Angianthus micropodioides</i>	P3
71.	<i>Byblis gigantea</i> (Rainbow Plant)	P3
72.	<i>Cyathochaeta teretifolia</i>	P3
73.	<i>Dampiera triloba</i>	P3
74.	<i>Eryngium pinnatifidum</i> subsp. <i>Palustre</i> (G.J. Keighery 13459)	P3
75.	<i>Idiosoma signatum</i> (Swan Coastal Plain shield-backed trapdoor spider)	P3
76.	<i>Jacksonia gracillima</i>	P3
77.	<i>Leioproctus contrarius</i> (a short-tongued bee)	P3
78.	<i>Lerista lineata</i> (Perth Slider, Lined Skink)	P3
79.	<i>Meioneectes tenuifolia</i>	P3
80.	<i>Neelaps calonotos</i> (Black-striped Snake, black-striped burrowing snake)	P3
81.	<i>Phlebocarya pilosissima</i> subsp. <i>pilosissima</i>	P3
82.	<i>Pimelea calcicola</i>	P3
83.	<i>Pithocarpa corymbulosa</i> (Corymbose Pithocarpa)	P3
84.	<i>Schoenus benthamii</i>	P3
85.	<i>Schoenus capillifolius</i>	P3
86.	<i>Schoenus pernisetis</i>	P3
87.	<i>Stylium aceratum</i>	P3
88.	<i>Stylium paludicola</i>	P3
89.	<i>Styphelia filifolia</i>	P3
90.	<i>Thysanotus anceps</i>	P3
91.	<i>Tyto novaehollandiae</i> subsp. <i>novaehollandiae</i> (Masked Owl (southwest))	P3

Priority 4

92.	<i>Aponogeton hexatepalus</i> (Stalked Water Ribbons)	P4
93.	<i>Ctenotus delli</i> (Dell's skink, Darling Range southwest Ctenotus)	P4
94.	<i>Dodonaea hackettiana</i> (Hackett's Hopbush)	P4
95.	<i>Drosera occidentalis</i> (Western Sundew)	P4
96.	<i>Falsistrellus mackenziei</i> (Western False Pipistrelle, Western Falsistrelle)	P4
97.	<i>Hydrocotyle lemnoides</i> (Aquatic Pennywort)	P4
98.	<i>Hydromys chrysogaster</i> (Water-rat, Rakali)	P4
99.	<i>Isoodon fusciventer</i> (Quenda, southwestern brown bandicoot)	P4

1889.	<i>Zantedeschia aethiopica</i> (Arum Lily)		Y	
1890.	<i>Zosterops lateralis</i> (Grey-breasted White-eye, Silvereye)			

Conservation Codes

- T - Rare or likely to become extinct
- X - Presumed extinct
- IA - Protected under international agreement
- S - Other specially protected fauna
- 1 - Priority 1
- 2 - Priority 2
- 3 - Priority 3
- 4 - Priority 4
- 5 - Priority 5

¹ For NatureMap's purposes, species flagged as endemic are those whose records are wholly contained within the search area. Note that only those records complying with the search criterion are included in the calculation. For example, if you limit records to those from a specific datasource, only records from that datasource are used to determine if a species is restricted to the query area.

APPENDIX 3

Protected Matters Search Tool Report

EPBC Act Protected Matters Report

This report provides general guidance on matters of national environmental significance and other matters protected by the EPBC Act in the area you have selected.

Information on the coverage of this report and qualifications on data supporting this report are contained in the caveat at the end of the report.

Information is available about [Environment Assessments](#) and the EPBC Act including significance guidelines, forms and application process details.

Report created: 26/10/20 14:46:12

Summary

Matters of National Environmental Significance

This part of the report summarises the matters of national environmental significance that may occur in, or may relate to, the area you nominated. Further information is available in the detail part of the report, which can be accessed by scrolling or following the links below. If you are proposing to undertake an activity that may have a significant impact on one or more matters of national environmental significance then you should consider the [Administrative Guidelines on Significance](#).

World Heritage Properties:	None
National Heritage Places:	None
Wetlands of International Importance:	1
Great Barrier Reef Marine Park:	None
Commonwealth Marine Area:	None
Listed Threatened Ecological Communities:	2
Listed Threatened Species:	23
Listed Migratory Species:	17

Other Matters Protected by the EPBC Act

This part of the report summarises other matters protected under the Act that may relate to the area you nominated. Approval may be required for a proposed activity that significantly affects the environment on Commonwealth land, when the action is outside the Commonwealth land, or the environment anywhere when the action is taken on Commonwealth land. Approval may also be required for the Commonwealth or Commonwealth agencies proposing to take an action that is likely to have a significant impact on the environment anywhere.

The EPBC Act protects the environment on Commonwealth land, the environment from the actions taken on Commonwealth land, and the environment from actions taken by Commonwealth agencies. As heritage values of a place are part of the 'environment', these aspects of the EPBC Act protect the Commonwealth Heritage values of a Commonwealth Heritage place. Information on the new heritage laws can be found at <http://www.environment.gov.au/heritage>

A [permit](#) may be required for activities in or on a Commonwealth area that may affect a member of a listed threatened species or ecological community, a member of a listed migratory species, whales and other cetaceans, or a member of a listed marine species.

Commonwealth Land:	1
Commonwealth Heritage Places:	None
Listed Marine Species:	26
Whales and Other Cetaceans:	None
Critical Habitats:	None
Commonwealth Reserves Terrestrial:	None
Australian Marine Parks:	None

Extra Information

This part of the report provides information that may also be relevant to the area you have nominated.

State and Territory Reserves:	2
Regional Forest Agreements:	None
Invasive Species:	40
Nationally Important Wetlands:	1
Key Ecological Features (Marine)	None

Details

Matters of National Environmental Significance

Wetlands of International Importance (Ramsar)	[Resource Information]
Name	Proximity
Forrestdale and thomsons lakes	Within 10km of Ramsar

Listed Threatened Ecological Communities	[Resource Information]
---	--

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Name	Status	Type of Presence
Banksia Woodlands of the Swan Coastal Plain ecological community	Endangered	Community likely to occur within area
Tuart (Eucalyptus gomphocephala) Woodlands and Forests of the Swan Coastal Plain ecological community	Critically Endangered	Community likely to occur within area

Listed Threatened Species	[Resource Information]
----------------------------------	--

Name	Status	Type of Presence
Birds		
Botaurus poiciloptilus		
Australasian Bittern [1001]	Endangered	Species or species habitat known to occur within area
Calidris canutus		
Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
Calidris ferruginea		
Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
Calyptorhynchus banksii_naso		
Forest Red-tailed Black-Cockatoo, Karrak [67034]	Vulnerable	Species or species habitat known to occur within area
Calyptorhynchus baudinii		
Baudin's Cockatoo, Long-billed Black-Cockatoo [769]	Endangered	Roosting known to occur within area
Calyptorhynchus latirostris		
Carnaby's Cockatoo, Short-billed Black-Cockatoo [59523]	Endangered	Species or species habitat known to occur within area
Leipoa ocellata		
Malleefowl [934]	Vulnerable	Species or species habitat likely to occur within area
Numenius madagascariensis		
Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
Rostratula australis		
Australian Painted Snipe [77037]	Endangered	Species or species habitat known to occur within area
Sternula nereis_nereis		
Australian Fairy Tern [82950]	Vulnerable	Species or species

Name	Status	Type of Presence
Mammals		
<u>Dasyurus geoffroii</u> Chuditch, Western Quoll [330]	Vulnerable	Species or species habitat likely to occur within area
Pseudocheirus occidentalis		
Western Ringtail Possum, Ngwayir, Womp, Woder, Ngoor, Ngoalangit [25911]	Critically Endangered	Species or species habitat likely to occur within area
Plants		
<u>Andersonia gracilis</u> Slender Andersonia [14470]	Endangered	Species or species habitat may occur within area
<u>Caladenia huegelii</u> King Spider-orchid, Grand Spider-orchid, Rusty Spider-orchid [7309]	Endangered	Species or species habitat known to occur within area
<u>Diuris drummondii</u> Tall Donkey Orchid [4365]	Vulnerable	Species or species habitat known to occur within area
<u>Diuris micrantha</u> Dwarf Bee-orchid [55082]	Vulnerable	Species or species habitat likely to occur within area
<u>Diuris purdiei</u> Purdie's Donkey-orchid [12950]	Endangered	Species or species habitat known to occur within area
<u>Drakaea elastica</u> Glossy-leaved Hammer Orchid, Glossy-leaved Hammer Orchid, Warty Hammer Orchid [16753]	Endangered	Species or species habitat known to occur within area
<u>Drakaea micrantha</u> Dwarf Hammer-orchid [56755]	Vulnerable	Species or species habitat known to occur within area
<u>Eleocharis keigheryi</u> Keighery's Eleocharis [64893]	Vulnerable	Species or species habitat may occur within area
<u>Lepidosperma rostratum</u> Beaked Lepidosperma [14152]	Endangered	Species or species habitat may occur within area
<u>Synaphea sp. Fairbridge Farm (D. Papenfus 696)</u> Selena's Synaphea [82881]	Critically Endangered	Species or species habitat may occur within area
<u>Thelymitra dedmaniarum</u> Cinnamon Sun Orchid [65105]	Endangered	Species or species habitat may occur within area

Listed Migratory Species		[Resource Information]
* Species is listed under a different scientific name on the EPBC Act - Threatened Species list.		
Name	Threatened	Type of Presence
Migratory Marine Birds		
<u>Apus pacificus</u> Fork-tailed Swift [678]		Species or species habitat likely to occur within area
Migratory Terrestrial Species		
<u>Motacilla cinerea</u> Grey Wagtail [642]		Species or species habitat may occur within area
Migratory Wetlands Species		

Name	Threatened	Type of Presence
<i>Actitis hypoleucus</i> Common Sandpiper [59309]		Species or species habitat known to occur within area
<i>Calidris acuminata</i> Sharp-tailed Sandpiper [874]		Species or species habitat known to occur within area
<i>Calidris canutus</i> Red Knot, Knot [855]	Endangered	Species or species habitat known to occur within area
<i>Calidris ferruginea</i> Curlew Sandpiper [856]	Critically Endangered	Species or species habitat known to occur within area
<i>Calidris melanotos</i> Pectoral Sandpiper [858]		Species or species habitat known to occur within area
<i>Calidris ruficollis</i> Red-necked Stint [860]		Species or species habitat known to occur within area
<i>Calidris subminuta</i> Long-toed Stint [861]		Species or species habitat known to occur within area
<i>Charadrius dubius</i> Little Ringed Plover [896]		Species or species habitat known to occur within area
<i>Limosa limosa</i> Black-tailed Godwit [845]		Species or species habitat known to occur within area
<i>Numenius madagascariensis</i> Eastern Curlew, Far Eastern Curlew [847]	Critically Endangered	Species or species habitat likely to occur within area
<i>Pandion haliaetus</i> Osprey [952]		Species or species habitat known to occur within area
<i>Philomachus pugnax</i> Ruff (Reeve) [850]		Species or species habitat known to occur within area
<i>Tringa glareola</i> Wood Sandpiper [829]		Species or species habitat known to occur within area
<i>Tringa nebularia</i> Common Greenshank, Greenshank [832]		Species or species habitat known to occur within area
<i>Tringa stagnatilis</i> Marsh Sandpiper, Little Greenshank [833]		Species or species habitat known to occur within area

Other Matters Protected by the EPBC Act

Commonwealth Land

[Resource Information]

The Commonwealth area listed below may indicate the presence of Commonwealth land in this vicinity. Due to the unreliability of the data source, all proposals should be checked as to whether it impacts on a Commonwealth area, before making a definitive decision. Contact the State or Territory government land department for further information.

Invasive Species

[Resource Information]

Weeds reported here are the 20 species of national significance (WoNS), along with other introduced plants that are considered by the States and Territories to pose a particularly significant threat to biodiversity. The following feral animals are reported: Goat, Red Fox, Cat, Rabbit, Pig, Water Buffalo and Cane Toad. Maps from Landscape Health Project, National Land and Water Resources Audit, 2001.

Name	Status	Type of Presence
Birds		
<i>Acridotheres tristis</i> Common Myna, Indian Myna [387]		Species or species habitat likely to occur within area
<i>Anas platyrhynchos</i> Mallard [974]		Species or species habitat likely to occur within area
<i>Carduelis carduelis</i> European Goldfinch [403]		Species or species habitat likely to occur within area
<i>Columba livia</i> Rock Pigeon, Rock Dove, Domestic Pigeon [803]		Species or species habitat likely to occur within area
<i>Passer domesticus</i> House Sparrow [405]		Species or species habitat likely to occur within area
<i>Passer montanus</i> Eurasian Tree Sparrow [406]		Species or species habitat likely to occur within area
<i>Streptopelia chinensis</i> Spotted Turtle-Dove [780]		Species or species habitat likely to occur within area
<i>Streptopelia senegalensis</i> Laughing Turtle-dove, Laughing Dove [781]		Species or species habitat likely to occur within area
<i>Sturnus vulgaris</i> Common Starling [389]		Species or species habitat likely to occur within area
<i>Turdus merula</i> Common Blackbird, Eurasian Blackbird [596]		Species or species habitat likely to occur within area
Mammals		
<i>Bos taurus</i> Domestic Cattle [16]		Species or species habitat likely to occur within area
<i>Canis lupus familiaris</i> Domestic Dog [82654]		Species or species habitat likely to occur within area
<i>Felis catus</i> Cat, House Cat, Domestic Cat [19]		Species or species habitat likely to occur within area
<i>Funambulus pennantii</i> Northern Palm Squirrel, Five-striped Palm Squirrel [129]		Species or species habitat likely to occur within area
<i>Mus musculus</i> House Mouse [120]		Species or species habitat likely to occur within area
<i>Oryctolagus cuniculus</i> Rabbit, European Rabbit [128]		Species or species habitat likely to occur within area

Name	Status	Type of Presence
Rattus norvegicus Brown Rat, Norway Rat [83]		Species or species habitat likely to occur within area
Rattus rattus Black Rat, Ship Rat [84]		Species or species habitat likely to occur within area
Vulpes vulpes Red Fox, Fox [18]		Species or species habitat likely to occur within area
Plants		
Anredera cordifolia Madeira Vine, Jalap, Lamb's-tail, Mignonette Vine, Anredera, Gulf Madeiravine, Heartleaf Madeiravine, Potato Vine [2643]		Species or species habitat likely to occur within area
Asparagus aethiopicus Asparagus Fern, Ground Asparagus, Basket Fern, Sprengi's Fern, Bushy Asparagus, Emerald Asparagus [62425]		Species or species habitat likely to occur within area
Asparagus asparagoides Bridal Creeper, Bridal Veil Creeper, Smilax, Florist's Smilax, Smilax Asparagus [22473]		Species or species habitat likely to occur within area
Asparagus plumosus Climbing Asparagus-fern [48993]		Species or species habitat likely to occur within area
Brachiaria mutica Para Grass [5879]		Species or species habitat may occur within area
Cenchrus ciliaris Buffel-grass, Black Buffel-grass [20213]		Species or species habitat may occur within area
Chrysanthemoides monilifera Bitou Bush, Boneseed [18983]		Species or species habitat may occur within area
Chrysanthemoides monilifera subsp. monilifera Boneseed [16905]		Species or species habitat likely to occur within area
Genista linifolia Flax-leaved Broom, Mediterranean Broom, Flax Broom [2800]		Species or species habitat likely to occur within area
Genista monspessulana Montpellier Broom, Cape Broom, Canary Broom, Common Broom, French Broom, Soft Broom [20126]		Species or species habitat likely to occur within area
Genista sp. X Genista monspessulana Broom [67538]		Species or species habitat may occur within area
Lantana camara Lantana, Common Lantana, Kamara Lantana, Large-leaf Lantana, Pink Flowered Lantana, Red Flowered Lantana, Red-Flowered Sage, White Sage, Wild Sage [10892]		Species or species habitat likely to occur within area
Lycium ferocissimum African Boxthorn, Boxthorn [19235]		Species or species habitat likely to occur within area
Olea europaea Olive, Common Olive [9160]		Species or species habitat may occur within area
Pinus radiata Radiata Pine Monterey Pine, Insignis Pine, Wilding Pine [20780]		Species or species habitat may occur within

Name	Status	Type of Presence area
Rubus fruticosus aggregate Blackberry, European Blackberry [68406]		Species or species habitat likely to occur within area
Sagittaria platyphylla Delta Arrowhead, Arrowhead, Slender Arrowhead [68483]		Species or species habitat likely to occur within area
Salix spp. except S.babylonica, S.x calodendron & S.x reichardtii Willows except Weeping Willow, Pussy Willow and Sterile Pussy Willow [68497]		Species or species habitat likely to occur within area
Salvinia molesta Salvinia, Giant Salvinia, Aquarium Watermoss, Kariba Weed [13665]		Species or species habitat likely to occur within area
Tamarix aphylla Athel Pine, Athel Tree, Tamarisk, Athel Tamarisk, Athel Tamarix, Desert Tamarisk, Flowering Cypress, Salt Cedar [16018]		Species or species habitat likely to occur within area
Reptiles		
Hemidactylus frenatus Asian House Gecko [1708]		Species or species habitat likely to occur within area

Nationally Important Wetlands	[Resource Information]
Name	
Gibbs Road Swamp System	
State	
WA	

Caveat

The information presented in this report has been provided by a range of data sources as acknowledged at the end of the report.

This report is designed to assist in identifying the locations of places which may be relevant in determining obligations under the Environment Protection and Biodiversity Conservation Act 1999. It holds mapped locations of World and National Heritage properties, Wetlands of International and National Importance, Commonwealth and State/Territory reserves, listed threatened, migratory and marine species and listed threatened ecological communities. Mapping of Commonwealth land is not complete at this stage. Maps have been collated from a range of sources at various resolutions.

Not all species listed under the EPBC Act have been mapped (see below) and therefore a report is a general guide only. Where available data supports mapping, the type of presence that can be determined from the data is indicated in general terms. People using this information in making a referral may need to consider the qualifications below and may need to seek and consider other information sources.

For threatened ecological communities where the distribution is well known, maps are derived from recovery plans, State vegetation maps, remote sensing imagery and other sources. Where threatened ecological community distributions are less well known, existing vegetation maps and point location data are used to produce indicative distribution maps.

Threatened, migratory and marine species distributions have been derived through a variety of methods. Where distributions are well known and if time permits, maps are derived using either thematic spatial data (i.e. vegetation, soils, geology, elevation, aspect, terrain, etc) together with point locations and described habitat; or environmental modelling (MAXENT or BIOCLIM habitat modelling) using point locations and environmental data layers.

Where very little information is available for species or large number of maps are required in a short time-frame, maps are derived either from 0.04 or 0.02 decimal degree cells; by an automated process using polygon capture techniques (static two kilometre grid cells, alpha-hull and convex hull); or captured manually or by using topographic features (national park boundaries, islands, etc). In the early stages of the distribution mapping process (1999-early 2000s) distributions were defined by degree blocks, 100K or 250K map sheets to rapidly create distribution maps. More reliable distribution mapping methods are used to update these distributions as time permits.

Only selected species covered by the following provisions of the EPBC Act have been mapped:

- migratory and
- marine

The following species and ecological communities have not been mapped and do not appear in reports produced from this database:

- threatened species listed as extinct or considered as vagrants
- some species and ecological communities that have only recently been listed
- some terrestrial species that overfly the Commonwealth marine area
- migratory species that are very widespread, vagrant, or only occur in small numbers

The following groups have been mapped, but may not cover the complete distribution of the species:

- non-threatened seabirds which have only been mapped for recorded breeding sites
- seals which have only been mapped for breeding sites near the Australian continent

Such breeding sites may be important for the protection of the Commonwealth Marine environment.

APPENDIX 4

Conservation Codes

Conservation Codes for Western Australian Flora and Fauna

Specially protected fauna or flora are species* which have been adequately searched for and are deemed to be, in the wild, either rare, at risk of extinction, or otherwise in need of special protection, and have been gazetted as such. Conservation codes have been transitioned under regulations 170, 171 and 172 of the *Biodiversity Conservation Regulations 2018*.

T Threatened species – Schedules 1-4

Listed by order of the Minister as Threatened in the category of critically endangered, endangered or vulnerable under section 19(1), or is a rediscovered species to be regarded as threatened species under section 26(2) of the *Biodiversity Conservation Act 2016* (BC Act).

- **Threatened fauna** is that subset of ‘Specially Protected Fauna’ listed under schedules 1 to 3 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for Threatened Fauna.
- **Threatened flora** is that subset of ‘Rare Flora’ listed under schedules 1 to 3 of the *Wildlife Conservation (Rare Flora) Notice 2018* for Threatened Flora.

The assessment of the conservation status of these species is based on their national extent and ranked according to their level of threat using IUCN Red List categories and criteria as detailed below.

CR Critically endangered species

Threatened species considered to be “*facing an extremely high risk of extinction in the wild in the immediate future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as critically endangered under section 19(1)(a) of the BC Act in accordance with the criteria set out in section 20 and the ministerial guidelines. Published under schedule 1 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for critically endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for critically endangered flora.

EN Endangered species

Threatened species considered to be “*facing a very high risk of extinction in the wild in the near future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as endangered under section 19(1)(b) of the BC Act in accordance with the criteria set out in section 21 and the ministerial guidelines. Published under schedule 2 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for endangered fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for endangered flora.

VU Vulnerable species

Threatened species considered to be “*facing a high risk of extinction in the wild in the medium-term future, as determined in accordance with criteria set out in the ministerial guidelines*”.

Listed as vulnerable under section 19(1)(c) of the BC Act in accordance with the criteria set out in section 22 and the ministerial guidelines. Published under schedule 3 of the *Wildlife*

Conservation (Specially Protected Fauna) Notice 2018 for vulnerable fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for vulnerable flora.

EX Presumed extinct species

Species where “*there is no reasonable doubt that the last member of the species has died*”, and listing is otherwise in accordance with the ministerial guidelines (section 24 of the BC Act).

Published as presumed extinct under schedule 4 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018* for extinct fauna or the *Wildlife Conservation (Rare Flora) Notice 2018* for extinct flora.

EW Extinct in the wild species

Species that “*is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; and it has not been recorded in its known habitat or expected habitat, at appropriate seasons, anywhere in its past range, despite surveys over a time frame appropriate to its life cycle and form*”, and listing is otherwise in accordance with the ministerial guidelines (section 25 of the BC Act).

Currently there are no threatened fauna or threatened flora species listed as extinct in the wild. If listing of a species as extinct in the wild occurs, then a schedule will be added to the applicable notice.

Specially protected species

Listed by order of the Minister as specially protected under section 13(1) of the BC Act. Meeting one or more of the following categories: species of special conservation interest; migratory species; cetaceans; species subject to international agreement; or species otherwise in need of special protection.

Species that are listed as threatened species (critically endangered, endangered or vulnerable) or extinct species under the BC Act cannot also be listed as Specially Protected species.

MI Migratory species

Fauna that periodically or occasionally visit Australia or an external Territory or the exclusive economic zone; or the species is subject of an international agreement that relates to the protection of migratory species and that binds the Commonwealth; and listing is otherwise in accordance with the ministerial guidelines (section 15 of the BC Act).

Includes birds that are subject to an agreement between the government of Australia and the governments of Japan (JAMBA), China (CAMBA) and The Republic of Korea (ROKAMBA), and fauna subject to the Convention on the Conservation of Migratory Species of Wild Animals (Bonn Convention), an environmental treaty under the United Nations Environment Program. Migratory species listed under the BC Act are a subset of the migratory animals, that are known to visit Western Australia, protected under the international agreements or treaties, excluding species that are listed as Threatened species.

Published as migratory birds protected under an international agreement under schedule 5 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

CD Species of special conservation interest (conservation dependent fauna)

Fauna of special conservation need being species dependent on ongoing conservation intervention to prevent it becoming eligible for listing as threatened, and listing is otherwise in accordance with the ministerial guidelines (section 14 of the BC Act).

Published as conservation dependent fauna under schedule 6 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

OS Other specially protected species

Fauna otherwise in need of special protection to ensure their conservation, and listing is otherwise in accordance with the ministerial guidelines (section 18 of the BC Act).

Published as other specially protected fauna under schedule 7 of the *Wildlife Conservation (Specially Protected Fauna) Notice 2018*.

P Priority species

Possibly threatened species that do not meet survey criteria, or are otherwise data deficient, are added to the Priority Fauna or Priority Flora Lists under Priorities 1, 2 or 3. These three categories are ranked in order of priority for survey and evaluation of conservation status so that consideration can be given to their declaration as threatened fauna or flora.

Species that are adequately known, are rare but not threatened, or meet criteria for near threatened, or that have been recently removed from the threatened species or other specially protected fauna lists for other than taxonomic reasons, are placed in Priority 4. These species require regular monitoring.

Assessment of Priority codes is based on the Western Australian distribution of the species, unless the distribution in WA is part of a contiguous population extending into adjacent States, as defined by the known spread of locations.

Priority 1: Poorly-known species

Species that are known from one or a few locations (generally five or less) which are potentially at risk. All occurrences are either: very small; or on lands not managed for conservation, e.g. agricultural or pastoral lands, urban areas, road and rail reserves, gravel reserves and active mineral leases; or otherwise under threat of habitat destruction or degradation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under immediate threat from known threatening processes. Such species are in urgent need of further survey.

Priority 2: Poorly-known species

Species that are known from one or a few locations (generally five or less), some of which are on lands managed primarily for nature conservation, e.g. national parks, conservation parks, nature reserves and other lands with secure tenure being managed for conservation. Species may be included if they are comparatively well known from one or more locations but do not meet adequacy of survey requirements and appear to be under threat from known threatening processes. Such species are in urgent need of further survey.

Priority 3: Poorly-known species

Species that are known from several locations, and the species does not appear to be under imminent threat, or from few but widespread locations with either large population size or significant remaining areas of apparently suitable habitat, much of it not under imminent threat. Species may be included if they are comparatively well known from several locations but do not meet adequacy of survey requirements and known threatening processes exist that could affect them. Such species are in need of further survey.

Priority 4: Rare, Near Threatened and other species in need of monitoring

- (a) Rare. Species that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection but could be if present circumstances change. These species are usually represented on conservation lands.
- (b) Near Threatened. Species that are considered to have been adequately surveyed and that are close to qualifying for vulnerable but are not listed as Conservation Dependent.
- (c) Species that have been removed from the list of threatened species during the past five years for reasons other than taxonomy.

*Species includes all taxa (plural of taxon - a classificatory group of any taxonomic rank, e.g. a family, genus, species or any infraspecific category i.e. subspecies or variety, or a distinct population).

Western Australian Ecological Communities

Threatened Ecological Communities

The BC Act provides for the statutory listing of threatened ecological communities (TECs) by the Minister.

Presumed Totally Destroyed (PD)

An ecological community that has been adequately searched for but for which no representative occurrences have been located. The community has been found to be totally destroyed or so extensively modified throughout its range that no occurrence of it is likely to recover its species composition and/or structure in the foreseeable future.

Critically Endangered (CR)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or that was originally of limited distribution and is facing severe modification or destruction throughout its range in the immediate future, or is already severely degraded throughout its range but capable of being substantially restored or rehabilitated.

Endangered (EN)

An ecological community that has been adequately surveyed and found to have been subject to a major contraction in area and/or was originally of limited distribution and is in danger of significant modification throughout its range or severe modification or destruction over most of its range in the near future.

Vulnerable (VU)

An ecological community that has been adequately surveyed and is found to be declining and/or has declined in distribution and/or condition and whose ultimate security has not yet been assured and/or a community that is still widespread but is believed likely to move into a category of higher threat in the near future if threatening processes continue or begin operating throughout its range.

Priority Ecological Communities

Possible threatened ecological communities that do not meet survey criteria or that are not adequately defined are added to the Priority Ecological Community List under priorities 1, 2 and 3. These three categories are ranked in order of priority for survey and/or definition of the community. Ecological communities that are adequately known, and are rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list, are placed in Priority 4. These ecological communities require regular monitoring. Conservation Dependent ecological communities are placed in Priority 5.

Priority One: Poorly-known ecological communities

Ecological communities that are known from very few occurrences with a very restricted distribution (generally ≤ 5 occurrences or a total area of $\leq 100\text{ha}$).

Occurrences are believed to be under threat either due to limited extent, or being on lands under immediate threat (e.g. within agricultural or pastoral lands, urban areas, active mineral leases) or for which current threats exist. May include communities with occurrences on protected lands. Communities may be included if they are comparatively well-known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under immediate threat from known threatening processes across their range.

Priority Two: Poorly-known ecological communities

Communities that are known from few occurrences with a restricted distribution (generally ≤10 occurrences or a total area of ≤200ha). At least some occurrences are not believed to be under immediate threat (within approximately 10 years) of destruction or degradation. Communities may be included if they are comparatively well known from one or more localities but do not meet adequacy of survey requirements, and/or are not well defined, and appear to be under threat from known threatening processes.

Priority Three: Poorly known ecological communities

- (i) Communities that are known from several to many occurrences, a significant number or area of which are not under threat of habitat destruction or degradation or;
- (ii) communities known from a few widespread occurrences, which are either large or with significant remaining areas of habitat in which other occurrences may occur, much of it not under imminent threat (within approximately 10 years), or;
- (iii) munities made up of large, and/or widespread occurrences, that may or may not be represented in the reserve system, but are under threat of modification across much of their range from processes such as grazing by domestic and/or feral stock, inappropriate fire regimes, clearing, hydrological change etc.

Communities may be included if they are comparatively well known from several localities but do not meet adequacy of survey requirements and/or are not well defined, and known threatening processes exist that could affect them.

Priority Four: Ecological communities that are adequately known, rare but not threatened or meet criteria for Near Threatened, or that have been recently removed from the threatened list. These communities require regular monitoring.

- (i) Rare. Ecological communities known from few occurrences that are considered to have been adequately surveyed, or for which sufficient knowledge is available, and that are considered not currently threatened or in need of special protection, but could be if present circumstances change. These communities are usually represented on conservation lands.
- (ii) Near Threatened. Ecological communities that are considered to have been adequately surveyed and that do not qualify for Conservation Dependent, but that are close to qualifying for a higher threat category.
- (iii) Ecological communities that have been removed from the list of threatened communities during the past five years.

Priority Five: Conservation Dependent ecological communities

Ecological communities that are not threatened but are subject to a specific conservation program, the cessation of which would result in the community becoming threatened within five years.

Commonwealth of Australia Conservation Codes

Threatened Flora and Fauna

Threatened fauna and flora may be listed under Section 178 of the *Environment Protection and Biodiversity Conservation Act 1999* (EPBC Act) in any one of the following six categories:

Extinct

A native species is eligible to be included in the extinct category at a particular time if, at that time, there is no reasonable doubt that the last member of the species has died.

Extinct in the wild

A native species is eligible to be included in the extinct in the wild category at a particular time if, at that time:

- a) it is known only to survive in cultivation, in captivity or as a naturalised population well outside its past range; or
- b) it has not been recorded in its known and/or expected habitat, at appropriate seasons, anywhere in its past range, despite exhaustive surveys over a time frame appropriate to its life cycle and form.

Critically endangered

A taxon is Critically Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing an extremely high risk of extinction in the wild.

Endangered

A taxon is Endangered when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a very high risk of extinction in the wild.

Vulnerable

A taxon is Vulnerable when the best available evidence indicates that it meets any of the five criteria for the category identified in Part 7.01 of the EPBC Regulations, and it is therefore considered to be facing a high risk of extinction in the wild.

Conservation dependent

A native species is eligible to be included in the conservation dependent category at a particular time if, at that time:

- a) the species is the focus of a specific conservation program the cessation of which would result in the species becoming vulnerable, endangered or critically endangered; or
- b) the following subparagraphs are satisfied:
 - i. the species is a species of fish;

- ii. the species is the focus of a plan of management that provides for management actions necessary to stop the decline of, and support the recovery of, the species so that its chances of long term survival in nature are maximised;
- iii. the plan of management is in force under a law of the Commonwealth or of a State or Territory;
- iv. cessation of the plan of management would adversely affect the conservation status of the species.

The EPBC Act does not provide for listing in a data deficient category. Where sufficient data (evidence) is unavailable to allow assessment by the Threatened Species Scientific Committee against the criteria for listing, the species are found to be ineligible. A recommendation is made to the Minister to not include the species in any category under the EPBC Act. For reasons of transparency and to inform future research, the Threatened Species Scientific Committee publishes the names of those species found to be data deficient. As data deficient is not a listing category under the EPBC Act, this has no statutory implications and the species is not considered to be listed under the EPBC Act.

Threatened Ecological Communities

Threatened Ecological communities under the EPBC Act are listed in three categories.

Critically endangered

If, at that time, an ecological community is facing an extremely high risk of extinction in the wild in the immediate future (indicative timeframe being the next 10 years).

Endangered

If, at that time, an ecological community is not critically endangered but is facing a very high risk of extinction in the wild in the near future (indicative timeframe being the next 20 years).

Vulnerable

If, at that time, an ecological community is not critically endangered or endangered, but is facing a high risk of extinction in the wild in the medium-term future (indicative timeframe being the next 50 years).

APPENDIX 6

Flora Species List

SPECIES LIST – Jandakot Road Planning Investigation Area

GYMNOSPERMS

CYCADACEAE

Macrozamia riedlei

Conostylis setigera subsp. *setigera*

Haemodorum spicatum

Phlebocarya ciliata

MONOCOTYLEDONS

ANACARDIACEAE

Lyginia barbata

Lyginia imberbis

HEMEROCALLIDACEAE

Caesia micrantha

Corynotheca micrantha

ARACEAE

**Zantedeschia aethiopica*

IRIDACEAE

**Freesia alba* x *leichlinii*

**Gladiolus caryophyllaceus*

Patersonia occidentalis

**Romulea rosea*

**Watsonia meriana* var. *bulbillifera*

ASPARAGACEAE

Chamaescilla corymbosa

Laxmannia squarrosa

Lomandra caespitosa

Lomandra hermaphrodita

Thysanotus multiflorus

Thysanotus patersonii

Thysanotus triandrus

ORCHIDACEAE

Caladenia arenicola

Caladenia discoidea

Caladenia flava

Diuris corymbosa

Diuris magnifica

Microlis media

Pterostylis recurva

Pterostylis vittata

Pyrorchis nigricans

Thelymitra crinita

CENTROLEPIDACEAE

Centrolepis aristata

COLCHICACEAE

Burchardia congesta

CYPERACEAE

Lepidosperma leptostachyum

Lepidosperma longitudinale

Lepidosperma pubisquamum

Mesomelaena pseudostygia

Schoenus curvifolius

Schoenus latitans

Schoenus subfascicularis

POACEAE

**Aira caryophyllea*

Amphipogon turbinatus

**Avena fatua*

**Briza maxima*

**Briza minor*

**Ehrharta calycina*

**Ehrharta longiflora*

**Eragrostis curvula*

**Lagurus ovatus*

DASYPOGONACEAE

Calectasia narragara

Dasypogon bromeliifolius

HAEMODORACEAE

Anigozanthos humilis subsp. *humilis*

Anigozanthos manglesii

Conostylis aculeata subsp. *aculeata*

RESTIONACEAE

Desmocladus flexuosus

Hypolaena exsulca

XANTHORRHOEACEAE	DILLENIACEAE
<i>Xanthorrhoea brunonis</i>	<i>Hibbertia huegelii</i>
<i>Xanthorrhoea preissii</i>	<i>Hibbertia hypericoides</i>
DICOTYLEDONS	
AIZOACEAE	DROSERACEAE
* <i>Carpobrotus edulis</i>	<i>Drosera erythrorhiza</i>
APIACEAE	<i>Drosera menziesii</i>
<i>Platysace compressa</i>	ELAECARPACEAE
<i>Trachymene pilosa</i>	<i>Platytheca galiooides</i>
ASTERACEAE	ERICACEAE
* <i>Arctotheca calendula</i>	<i>Conostephium pendulum</i>
<i>Brachyscome iberidifolia</i>	<i>Conostephium preissii</i>
* <i>Conyza bonariensis</i>	<i>Leucopogon polymorphus</i>
<i>Hyalosperma cotula</i>	<i>Styphelia conostephiooides</i>
* <i>Hypochaeris glabra</i>	<i>Styphelia xerophylla</i>
<i>Millotia myosotidifolia</i>	EUPHORBIACEAE
<i>Podolepis gracilis</i>	* <i>Euphorbia terracina</i>
<i>Podotheca angustifolia</i>	FABACEAE
<i>Podotheca gnaphaliooides</i>	* <i>Acacia iteaphylla</i>
<i>Senecio pinnatifolius</i>	* <i>Acacia longiflora</i>
<i>Siloxerus humifusus</i>	<i>Acacia pulchella</i>
* <i>Sonchus oleraceus</i>	<i>Acacia stenoptera</i>
* <i>Taraxacum officinale</i>	<i>Aotus procumbens</i>
* <i>Urospermum picroides</i>	<i>Bossiaea eriocarpa</i>
* <i>Ursinia anthemoides</i>	<i>Daviesia nudiflora</i>
<i>Quinetia urvillei</i>	<i>Daviesia triflora</i>
CAMPANULACEAE	<i>Euchilopsis linearis</i>
* <i>Wahlenbergia capensis</i>	<i>Gastrolobium capitatum</i>
<i>Wahlenbergia preissii</i>	<i>Gompholobium tomentosum</i>
CARYOPHYLLACEAE	<i>Hardenbergia comptoniana</i>
* <i>Cerastium glomeratum</i>	<i>Hovea pungens</i>
* <i>Petrorhagia dubia</i>	<i>Hovea trisperma</i> var. <i>trisperma</i>
CASUARINACEAE	<i>Jacksonia furcellata</i>
<i>Allocasuarina fraseriana</i>	<i>Kennedia prostrata</i>
<i>Allocasuarina humilis</i>	<i>Pultenaea reticulata</i>
CRASSULACEAE	* <i>Trifolium campestre</i>
<i>Crassula colorata</i>	FUMARIACEAE
	* <i>Fumaria capreolata</i>

GERANIACEAE	PORFULACACEAE
* <i>Erodium moschatum</i>	<i>Calandrinia corrigioloides</i>
* <i>Pelargonium capitatum</i>	<i>Calandrinia</i> sp.
GOODENIACEAE	PRIMULACEAE
<i>Dampiera linearis</i>	* <i>Lysimachia arvensis</i>
<i>Lechenaultia floribunda</i>	
HALORAGACEAE	PROTEACEAE
<i>Gonocarpus pithyoides</i>	<i>Adenanthera cygnorum</i>
LAMIACEAE	<i>Banksia attenuata</i>
<i>Hemiandra pungens</i>	<i>Banksia grandis</i>
LAURACEAE	<i>Banksia ilicifolia</i>
<i>Cassytha racemosa</i>	<i>Banksia menziesii</i>
LOGANIACEAE	<i>Persoonia saccata</i>
<i>Phyllangium paradoxum</i>	<i>Petrophile linearis</i>
LORANTHACEAE	<i>Stirlingia latifolia</i>
<i>Nuytsia floribunda</i>	<i>Synaphea spinulosa</i>
MYRTACEAE	RUBIACEAE
<i>Astartea affinis</i>	<i>Opercularia vaginata</i>
<i>Beaufortia squarrosa</i>	
<i>Calytrix flavescens</i>	RUTACEAE
<i>Eremaea pauciflora</i>	<i>Boronia spathulata</i>
<i>Eucalyptus marginata</i>	<i>Philotheca spicata</i>
<i>Eucalyptus rufa</i>	SANTALACEAE
<i>Eucalyptus todtiana</i>	<i>Leptomeria pauciflora</i>
<i>Hypocalymma angustifolium</i>	STYLDIACEAE
<i>Hypocalymma robustum</i>	<i>Stylium brunonianum</i>
<i>Kunzea glabrescens</i>	<i>Stylium piliferum</i>
<i>Melaleuca preissiana</i>	<i>Stylium repens</i>
<i>Melaleuca raphiophylla</i>	<i>Stylium schoenoides</i>
<i>Melaleuca seriata</i>	THYMELEACEAE
<i>Melaleuca thymoides</i>	<i>Pimelea rosea</i>
<i>Pericalymma ellipticum</i>	<i>Pimelea suaveolens</i>
<i>Regelia inops</i>	<i>Pimelea sulphurea</i>
<i>Scholtzia involucrata</i>	
PHYLLANTHACEAE	
<i>Poranthera microphylla</i>	

APPENDIX 7

Quadrat Data

QUADRAT JR 1

50 393372 E 6446748 N

Vegetation: *Melaleuca preissiana/Banksia menziesii* Low Open Woodland over
Beaufortia squarrosa/Astartea affinis Open Heath

Condition: Good

Soil Type: Brown-grey sand

Landform: Slight depression

Date: 24.9.20

Recorder: Paul van der Moezel
